Wireless Control for Shading, Lighting & Indoor Climate

# WIRELESS CONTROL SOLEXA HOME

## AUTOMATIC CONTROL FOR SHADING, LIGHTING AND CLIMATE

Solexa Home combines weather station, control panel and base station into one central wireless solution that intelligently controls awnings, roller shutters, blinds, windows, lighting and heating devices. The system responds autonomously to changing weather conditions and ensures a balanced indoor climate.

All necessary sensors are integrated: the weather station records brightness, wind, rain and outdoor temperature, and receives the GPS signal for time and sun direction. The base station measures room temperature and also serves as a charging cradle for the control panel.

Solexa Home processes data locally, without cloud – reliable, data-secure and independent of the internet.

### ONE SET – EVERYTHING COVERED

- Time-saving installation through wireless communication, ideal for retrofitting in existing buildings
- Simply place the base station or conveniently mount it on the wall
- Easy expansion with Elsner wireless actuators, sensors and remote controls
- Free app for optional control via smartphone or tablet (iOS & Android)

### THE EASY ENTRY INTO THE SMART HOME WORLD!

- Shading automation for optimal light conditions and efficient heat-management – depending on brightness, temperature, sun position and time
- Ventilation automation for independent, efficient window ventilation – depending on temperature and time
- Rain, wind and frost protection for blinds – responds in seconds to weather changes
- Lighting control for relaxed evenings – depending on brightness and time
- Heating automation for constant comfort temperature with efficient energy-management – depending on temperature and time
- Weekly and daily programmes – tailored to personal daily life
